

This is how the webpage looks like when the user first enters the webpage, there isn't much content as the webpage is more PHP and functionality based. The webpage is a technology shop. The user can sign up, login, shop, go to their cart, change their account information or delete their account if they wish. They can even subscribe to the mailing list.

This the footer part, which user enters their email if they want to subscribe to the mail list.

Subscribe to our newsletter

Monthly digest of what's new and exciting from us.

Subscribe

This field is required.

If the user clicks on the subscribe button without entering their email first they get an error saying that the field is required.

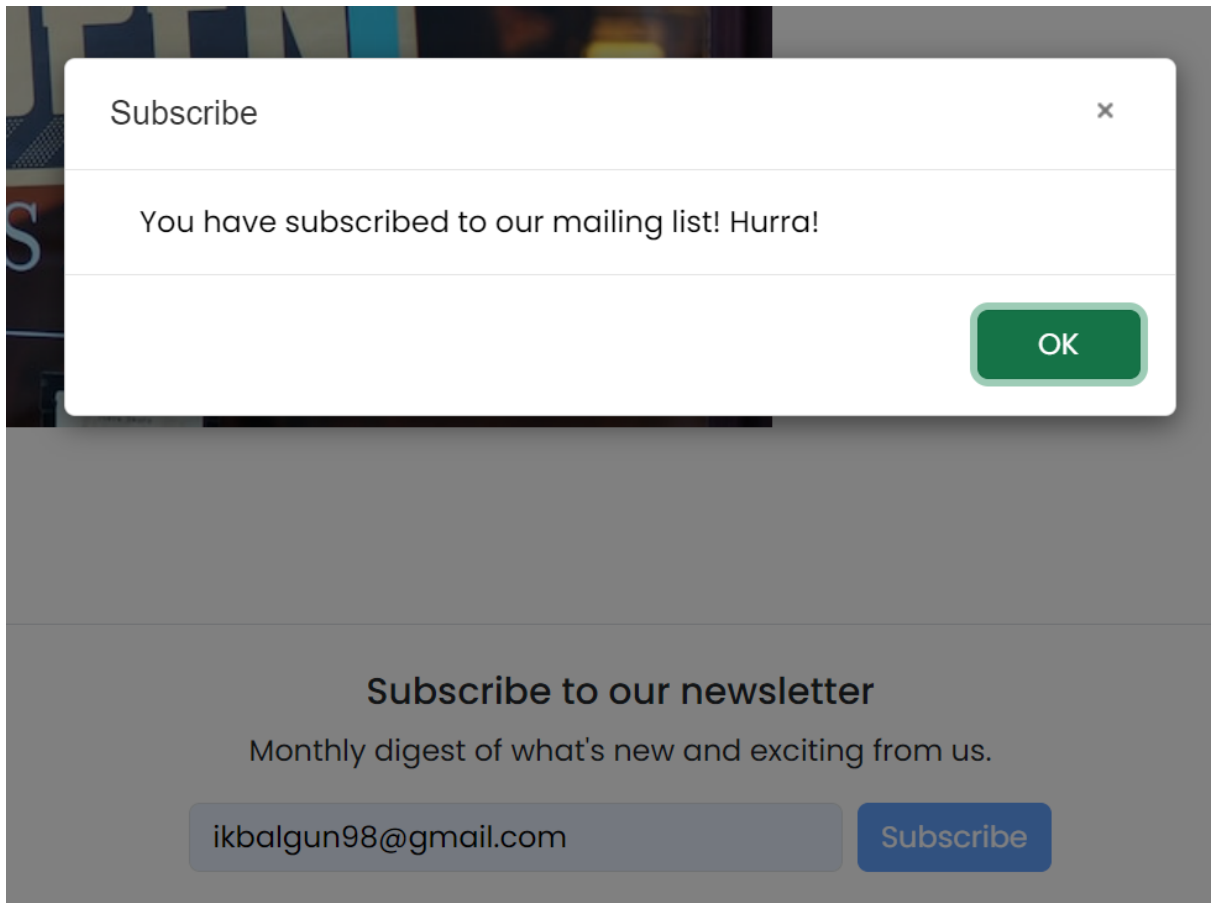

Subscribe to our newsletter

Subscribe

Please enter a valid email address.

If the user does not enter a valid email address they get another message stating that.

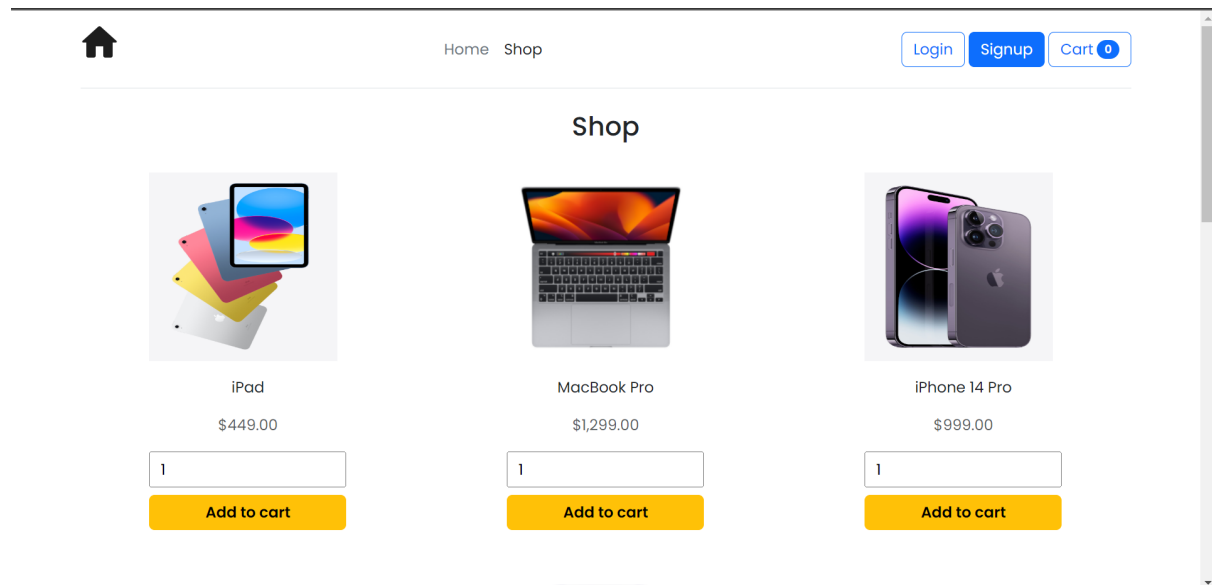

After the user enters a valid email address they get a real email (from me) to their account. A pop up message informs the user so that they know they are now subscribed.

Subscribe

The subscribe button gets disabled as well (gets a lighter color and the pointer is no longer clickable)

This is the shop page, showing various products.

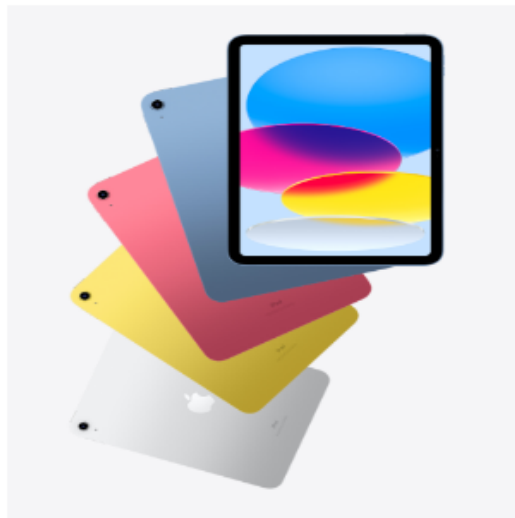

iPad

\$449.00

Add to cart

The user can either type in a quantity for the item or they can use the up and down arrows to increase or decrease the quantity which does not go under "1".

iPad

\$449.00

Added!

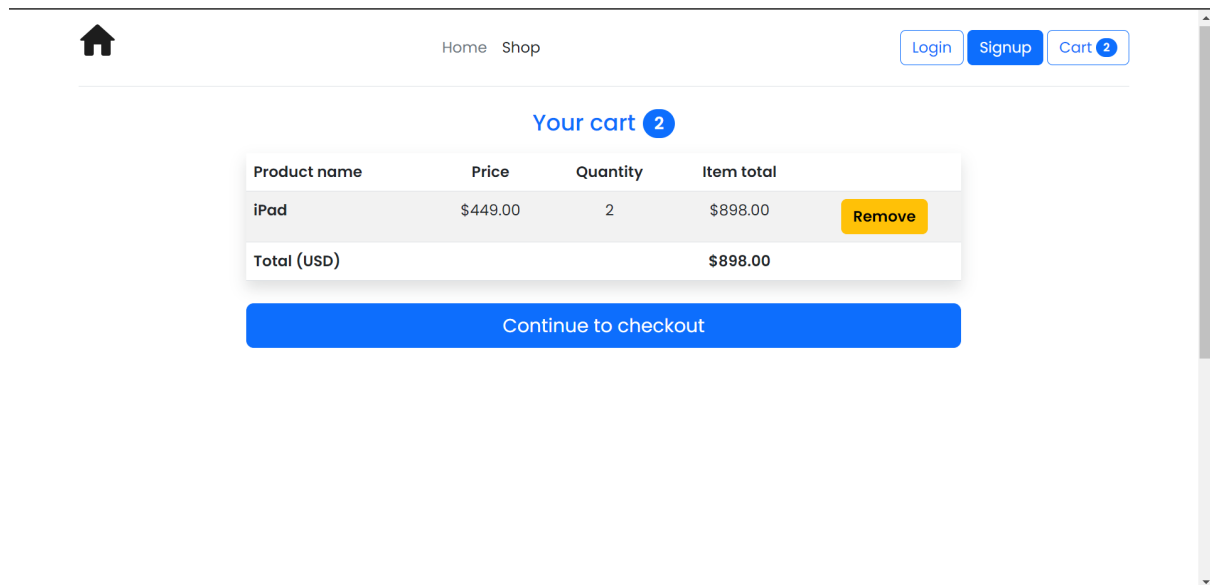

When the user clicks on the “Add to cart” button the button lights green and informs the user that the item is added to their cart.

Login

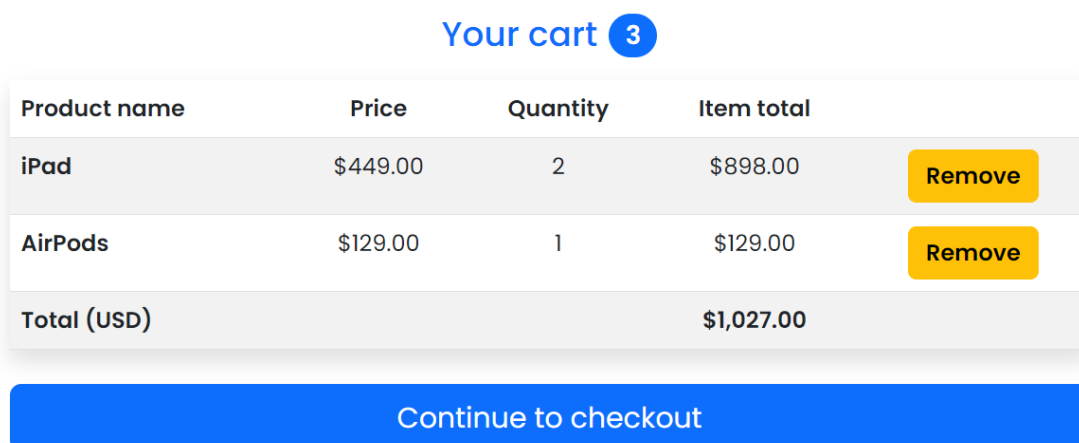

Signup

Cart **2**

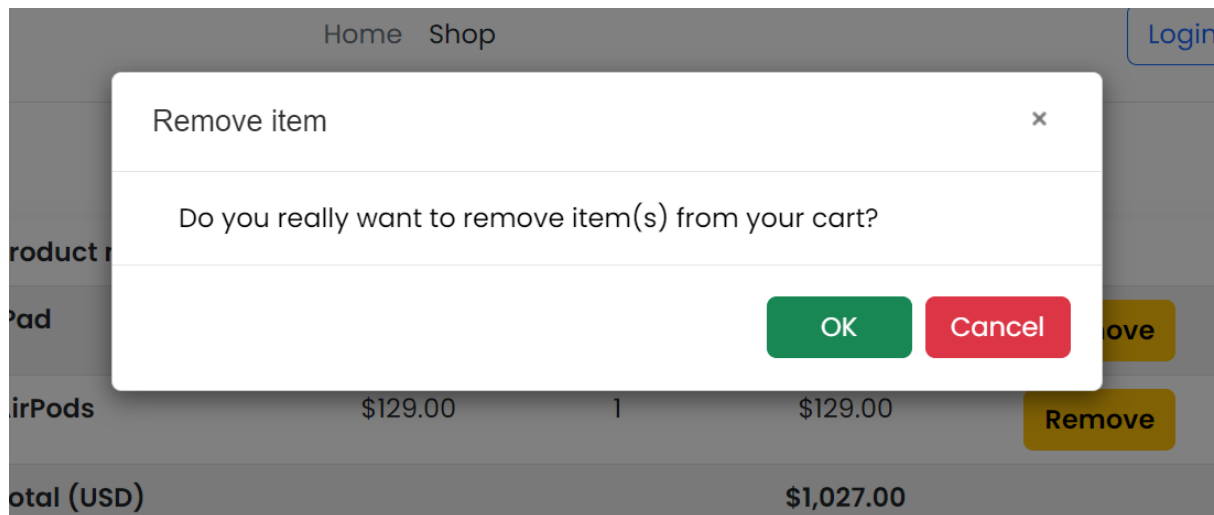

The cart button at the top right corner also gets updated with the amount of items in the cart.

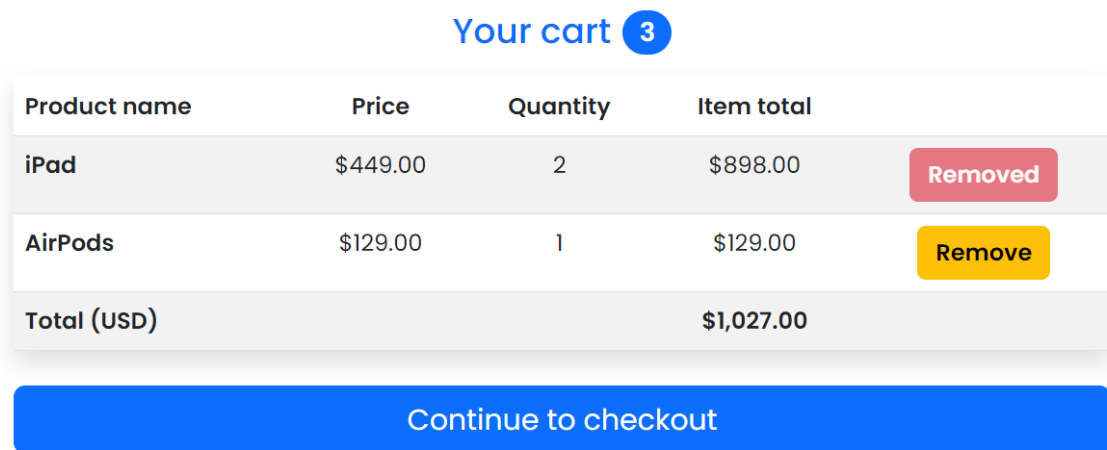

When the user goes to the cart page, they see the items in their cart. All of the information related to the item is shown.

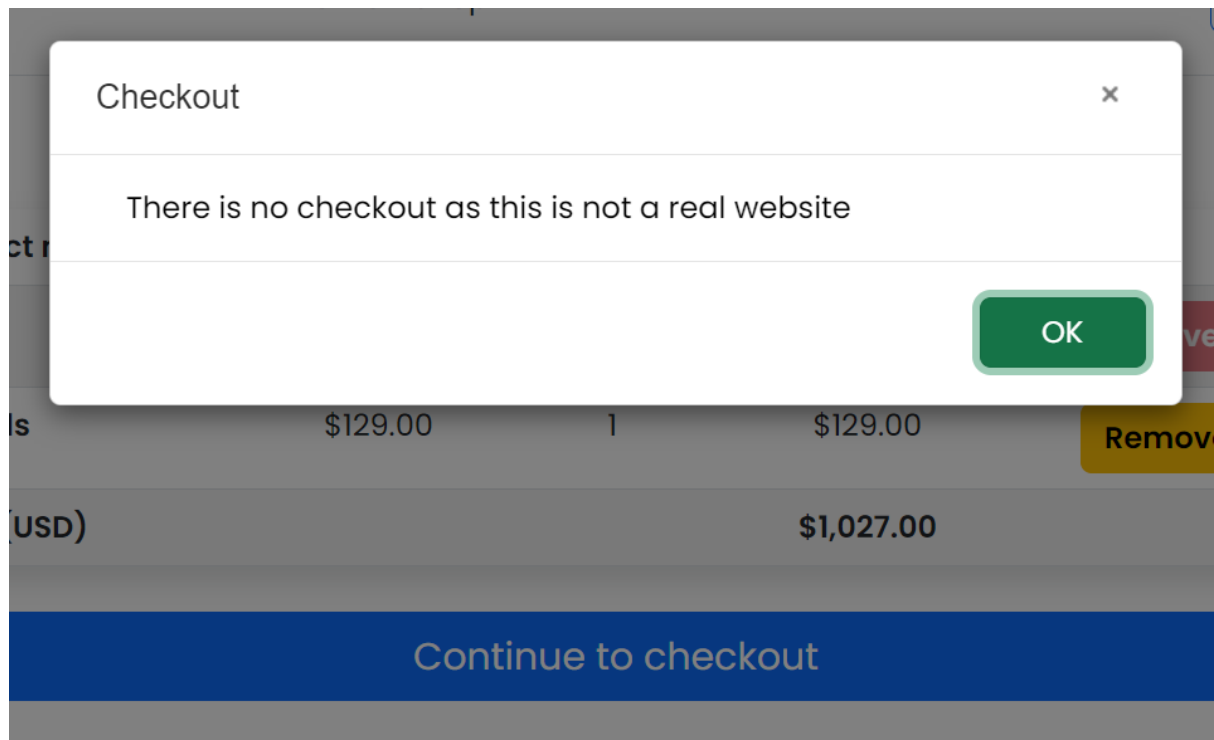

As several items are added to the cart the cart total is also updated together with the total count of items in the cart.

If the user clicks on the remove button, a confirm dialog pops up to ask the user if they really want to remove the item(s) from their cart.

If they click OK the item will be removed, the remove button will change to show that the item was removed and it will get disabled.

If the user clicks on the "Continue to checkout" button they will get an alert saying that there is no checkout as this is not a real webpage.

LOGIN

Login

Don't have an account? [Sign up](#)

[Back to homepage](#)

If the user clicks the login button they will go to the login page. They can go back to the homepage if they click "Back to homepage" or they can go to the sign up page if they click on "Sign up".

Account created!

If they enter valid inputs and submit the form they will get information that their account is created.

The welcome page will display their name and the button at the header will change also. The user can now go to their account page or log out. If they add items to their cart, their cart will stay there even when they log out and come back. (Users without account lose their cart)

When the user goes to their account page they can see their information, their name and email. They can change their name or email. They can even delete their account.

Hi, Person!

Your email is **person@mail.com**

Change name

Change email

Delete account

Change name

New name

Change

Cancel

If they click on the “Change name” button a little form pops up asking for the new name. They can click on the cancel button to close the form.

Hi, Person!

Your email is **person@mail.com**
